Diablo Canyon Power Plant, Long-Term Seismic Program, 527
Diagenic alteration of fossil protein materials, 188-190
Diagenic pathways of mineralized amino acids, 188f
Diffusion-equation analysis
age of scarplike landforms, 313-338
data analysis, 316-325
diffusivity estimates, 326, 327-329
field data collection, 315
Hirano’s equation, 329-330
homogeneous diffusion equation, 313
inverse solutions for age, 334
lunar craters, 332-334
nonlinear models, 334-335
scarplike landform, geometry, 314f
slope-offset analysis, 316-327
steady-state morphology arising from lateral erosion, 330-332
terrestrial cinder cones, 332-334
theory, 315-327
uncertainties, 325-329
Displaced surfaces correlations, soil geomorphology in fault studies, 287-288
Dose rate measurement, luminescence geochronology, 167-168

E
Earliest known rodents with microtine characteristics, 382-383
Earth material age, 5-6
Earthquake
1964 Alaska, sitka spruce damage, 19f
Conway segment, dated by lichenometry, 522-526
1739 Great Wall of China, fault scarps, 321-323
Hope fault, dated by lichenometry, 522-526
1989 Loma Prieta, fault geometry inferred from, 505f
Lost River fault, Borah Peak, Idaho, antecedent scarps, 322, 324-325
1812 San Andreas, tree-ring evidence, 549-552
Earthquake dating, 288, 518-519
Earthquake recurrence parameters, 519-520
Earthquakes, intervals between surface-rupturing, 491f
Earthquakes, sclerochronology as useful record, 29-30
Earth’s magnetic field, 339-342
El Nino Southern Oscillation events, sea-level changes, 29
Electron microprobe analysis in tephrochronology, 370
Electron-spin resonance dating fault rocks confidence assessment, 182
data analysis, 182
field collection, 181-182
future developments, 185
geo logic settings, 180
laboratory treatment, 181-183
limitations, 184-185
method, 181-185
paleoseismic applications, 182, 183
sample preservation, 182
INDEX

theory, 177-179

time range, 180-181

Quaternary Geochronology
Methods and Applications

surveys the established and experimental means of dating Quaternary surficial materials. Experts review the basic theory, procedures, accuracy and applications for each method. A series of case studies illuminate the key role of geochronology in Quaternary geology and the emerging field of paleoseismology. This is an authoritative reference for Quaternary scientists, geochronologists, paleoseismologists and students.
